

KatiePoint User Guide

Welcome to **KatiePoint** — a heavily-customised fork of CrossPoint firmware for the **Xteink X4** (and X3) e-paper reader. This guide covers the hardware controls, navigation, and reading features of the device.

Note

KatiePoint has diverged substantially from upstream CrossPoint. If you have used CrossPoint before, the sections on the [Home Screen](#), [Getting Books onto the Device](#), [Sync](#), [Reading Stats](#), and the [Settings Reference](#) are the ones most worth reading. For the full technical changelog, see [CHANGES.md](#).

Contents

- [1. Hardware Overview](#)
- [2. Power & Startup](#)
- [3. Home Screen](#)
- [4. Reading Mode](#)
- [5. Getting Books onto the Device](#)
- [6. Browsing Your Library](#)
- [7. The Reader Menu](#)
- [8. Bookmarks & Clippings](#)
- [9. Reading Stats](#)
- [10. Sync \(BookFusion & KOReader\)](#)
- [11. Settings Reference](#)
- [12. Sleep Screen](#)
- [13. Firmware Updates](#)
- [14. Supported Languages](#)
- [15. Troubleshooting & Escaping Bootloop](#)

1. Hardware Overview

KatiePoint runs on the **Xteink X4** and **X3**. Physical button positions differ slightly between models, but the *logical* functions are the same.

Button Layout (X4)

Location	Buttons
Bottom Edge	Back, Confirm, Left, Right (front buttons — remappable)
Right Side	Up / Down (page turn), Power, Reset

On the **X3**, the **Power** button is on the top-right; the **Up/Down** buttons sit on the right edge. On the **X4**, Power is on the right edge above Up/Down.

The four **front buttons** (Back / Confirm / Left / Right) can be reassigned to different physical positions in **Settings** → **System** → **Remap Front Buttons**. Throughout this guide, button names refer to their *logical* role, not a fixed physical position.

Taking a Screenshot

- Press **Power + Down** at the same time to save a screenshot to `screenshots/` on the SD card.
- Or, while reading, open the [Reader Menu](#) and choose **Take Screenshot**.
- You can also bind **Screenshot** to any reader button (see [Reader Controls](#)).

2. Power & Startup

Power On / Off

- **Turn on/off:** press and hold **Power** for about half a second.
- You can configure a **short** Power press to do something else (page turn, sleep, sync, bookmark) — see [Short Power Button](#). When a short press is repurposed, turning the device *off* requires a long press.
- **Reboot / recover:** press and release **Reset**, then quickly press and hold **Power** for a few seconds.

First Launch

On first boot you land on the [Home Screen](#). On later restarts, KatiePoint automatically reopens the last book you were reading.

3. Home Screen

The Home screen is the main hub. Its layout depends on the **UI Theme** (Settings → Display → UI Theme):

Theme	Home layout
Classic	Original KatiePoint look; one recent-book tile plus the menu.
Lyra	Rounded elements and menu icons; one recent-book tile.
Lyra Extended	Like Lyra, but shows the 3 most recent books instead of 1.
Lyra Library	Replaces the recent tile with a paginated cover grid of every book on the SD card (the Library view).

Recent-book tile

Shows your most recently opened book(s) with cover, title, author, and progress.

- **Confirm** on a tile → open that book.
- **Long-press Confirm** on a tile → open the **Book Options** popup (an inline modal): *Mark as Read, Reset Progress, Shelve, Delete, Reindex, Regenerate Cover*. This does not navigate away from Home.

Home menu

The menu (shown at the bottom, or as icons in Lyra themes) contains:

- **Browse Files** — the file/folder browser (see [Browsing Your Library](#)).
- **OPDS Browser** — *only shown when an OPDS server URL is configured*. Browse and download from an OPDS catalogue.
- **File Transfer** — get books onto the device (see [Getting Books onto the Device](#)).
- **Reading Stats** — your reading statistics (see [Reading Stats](#)).
- **Settings** — device configuration (see [Settings Reference](#)).

Navigate: use **Left/Up** and **Right/Down** (or the side **Up/Down** buttons) to move the cursor; **Confirm** to select.

4. Reading Mode

Once a book is open, the buttons change to reading functions.

Page Turning

Action	Buttons
Previous Page	Left or side Up
Next Page	Right or side Down

If **Short Power Button** is set to **Page Turn**, a short Power press also turns the page.

Chapter Navigation

- **Next chapter:** press and *hold* **Right** (or side **Down**) briefly, then release.
- **Previous chapter:** press and *hold* **Left** (or side **Up**) briefly, then release.

This behaviour is configurable. By default long-press skips chapters; you can change long-press to *scroll a page* instead, and every reader button's short- and long-press action can be reassigned — see [Reader Controls](#).

System Navigation

- **Return Home:** press **Back**.

- **Return to Browse Files:** press and *hold* **Back**.
- **Reader Menu:** press **Confirm** (see [The Reader Menu](#)).

On-screen button hints

KatiePoint can draw small labels next to each physical button while reading, so you always know what each press does. Enable via **Settings** → **Reader** → **Show Button Hints** or the **Button Hints** reader-menu action. Hint modes: **None**, **Short Press**, **Long Press**, **Front Only (Short)**, **Front Only (Long)**. Hints are X3/X4-aware and never overlap page text.

not ever feel completely comfortable around the wolf. After a time, there seemed far fewer of them, and no more coming into the area. We began to be able to hunt game for ourselves. For that, I went afoot, for we hunted more companionably that way. Nighteyes approved of my physical improvement over the summer. That winter, for the first time since Regal had poisoned me, I felt I had the full use of my body and strength again. The vigorous mornings of hunting and the deep hours of the night with Molly would have been enough life for any man. There is something completely satisfying about simple things such as these.

Nxt pg

I suppose I wanted my life to be always this simple and complete. I tried to ignore things I knew were dangerous. The continued fine weather, I told myself, would assure Verity a fine start to his journey. I put from my mind whether there would be any end-of-season raids from the Red Ships while we were so unprotected. I avoided, too, Regal and the sudden round of social occasions that filled Buckkeep with his followers and kept the torches burning late every night in the Great Hall. Serene and Justin were also much more in evidence about Buckkeep. I never entered a room where they were but that I felt the arrows of their dislike. I began to avoid the common rooms in the evenings, where I must either encounter them, or Regal's guests who had come to swell our winter court.

Prv Pg

Nxt pg

Verity had not been gone more than two days before I heard rumours that the true purpose

Menu

Nxt pg

Auto-Turn

Automatically turns the page on a timer. Set via the reader menu (**Auto Page Turn**): **Off**, **Auto**, or a fixed interval (60s / 50s / 40s / 35s / 30s / 25s / 20s). **Auto** uses your calibrated reading speed and shows the estimate inline, e.g. Auto (~45s) ; if no speed has been measured yet, Auto behaves as Off.

Bionic Reading

An optional mode that bolds the leading portion of each word to guide the eye. Toggle it in **Settings** → **Reader** → **Bionic Reading**, or bind **Bionic** to a reader button. Changing it re-lays out the text, so cached

pages regenerate the first time you open a book afterwards.

Off (left) vs. on (right):

I prepared myself most carefully for dinner that evening. When I was finally dressed in Mistress Hasty's latest set of clothes for me, I looked almost as fine as the Fool. I had decided that as yet I would not mourn Verity, nor even give the appearance of mourning. As I descended the stairs, it seemed to me that most of the keep was converging on the Great Hall this evening. Evidently all had been summoned to attend, grand folk and humble.

I found myself seated at a table with Burrich and Hands and other of the stable-folk. It was as humble a spot as I had ever been given since King Shrewd had taken me under his wing, and yet the company was more to my liking than that of the higher tables, for the honoured tables of the Great Hall were packed with folk little known to me, the dukes and visiting nobility of Tilth and Farrow for the most part. There were a scattering of faces I knew, of course. Patience was seated as almost befitted her rank, and Lacey was actually seated at a table above me. I saw no sign of Molly anywhere. There were a scattering of folk from Buckkeep Town, most of them the well-to-do, and most of them seated more favourably than I would have expected. The King was ushered in, leaning on the newly elegant Fool, followed by Kettricken.

Her appearance shocked me. She wore a simple robe of drab brown, and she had cut her hair for mourning. She had left herself less than a hand's-width of hair and, bereft of its rich weight, it stuck out about her head like a dandelion gone to seed. Its colour seemed to have been cut away with its length, leaving it as pale as the Fool's. So accustomed had I been to seeing the heavy gold braids of her hair that her head now appeared oddly small upon her wide shoulders. Her pale blue eyes were made strange by eyelids reddened by weeping. She did not look like a mourning queen.

for a simple death for a master who was kind to a freakish, jeering servant.'

He made no more rebuke than that. He lifted the latches and undid the bolts and left quietly. The rich clothing and careful walk made him appear deformed to me, as his motley and capers never had. I closed the door softly behind him and then stood leaning against it as if I could hold the future out.

I prepared myself most carefully for dinner that evening. When I was finally dressed in Mistress Hasty's latest set of clothes for me, I looked almost as fine as the Fool. I had decided that as yet I would not mourn Verity, nor even give the appearance of mourning. As I descended the stairs, it seemed to me that most of the keep was converging on the Great Hall this evening. Evidently all had been summoned to attend, grand folk and humble.

The King was ushered in, leaning on the newly elegant Fool, followed by Kettricken.

Her appearance shocked me. She wore a simple

5. Getting Books onto the Device

KatiePoint reads `.epub`, `.txt`, and `.xrc` files. There are several ways to load them.

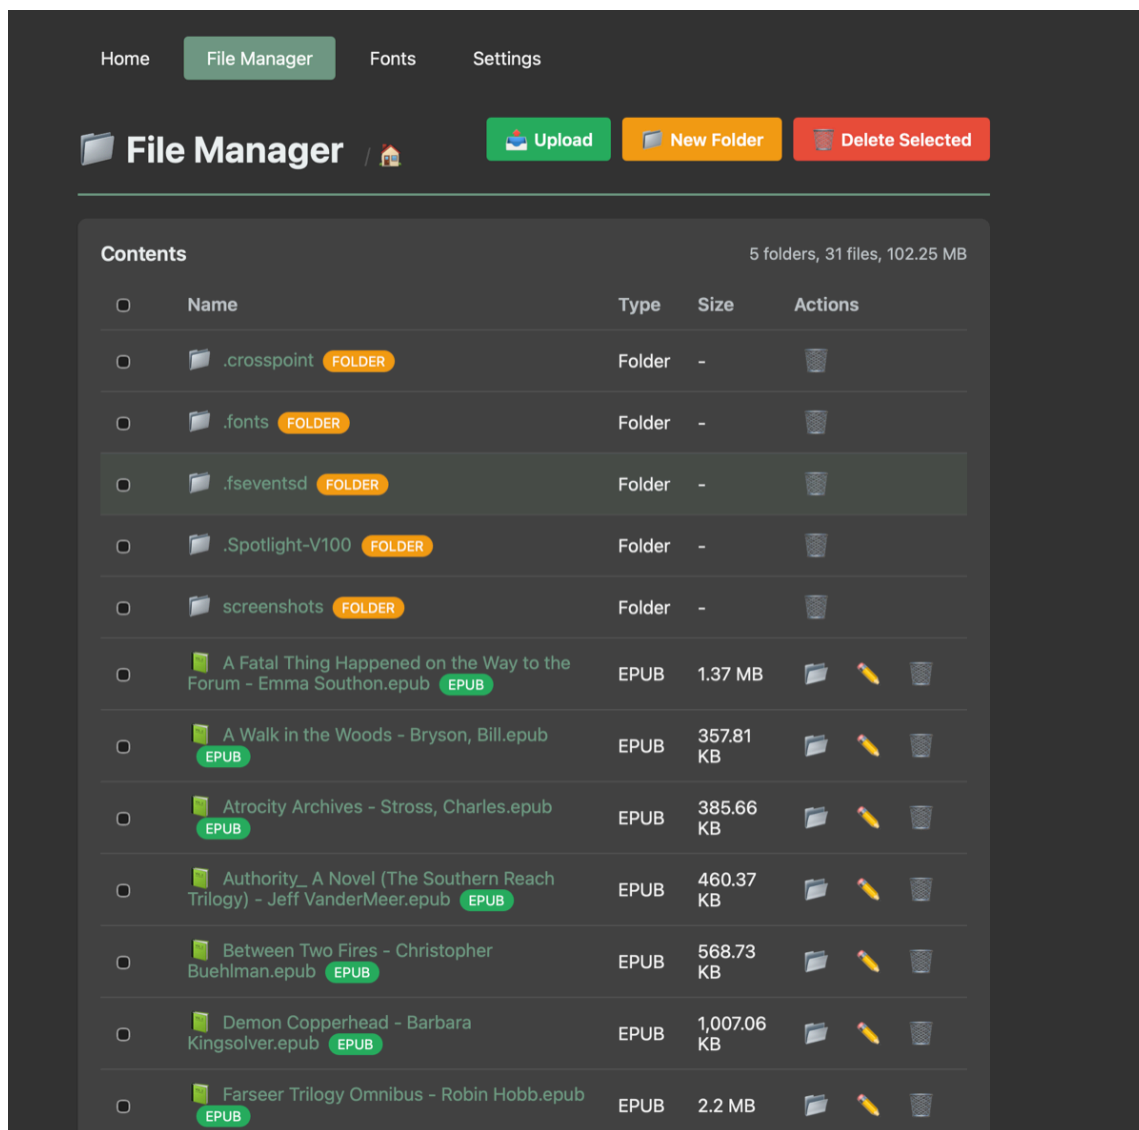

SD card (offline)

Insert the SD card into a computer and copy files anywhere on it. KatiePoint scans the whole card. When you add files this way, the file browser sees them immediately; the Library cover grid may need a rescan (**Settings** → **Developer** → **Recache Library**, with Developer Mode on).

File Transfer menu

Home → **File Transfer** offers four wireless options:

1. **Join Network** — connects to your WiFi and hosts a web upload server. Open the shown URL in a browser on the same network to drag-and-drop books (and manage files / fonts / settings). See the [webserver docs](#).

2. **Calibre Wireless** — receive books sent from Calibre's *Send to device*. Install the [crosspoint_reader Calibre plugin](#) (Preferences → Plugins → Load plugin from file), then on the device choose *Calibre Wireless* and join a network. Your computer must be on the same WiFi.
3. **Create Hotspot** — the device becomes its own access point when no shared WiFi is available; join it from your computer, then use the web uploader.
4. **BookFusion Library** — browse and download from your linked [BookFusion](#) cloud library (see [Sync](#) for account linking).

OPDS Browser

If you run an OPDS catalogue (e.g. Calibre Content Server), set it up in **Settings** → **System** → **OPDS Browser** (for Calibre Content Server, append `/opds` to the URL). Only HTTP **Basic** auth is supported — if using Calibre with auth, switch it from Digest to Basic. Once configured, **OPDS Browser** appears on the Home menu.

Download from URL

Settings → **Developer** → **Download from URL** (Developer Mode) fetches a file (e.g. a `firmware.bin` or an EPUB) directly to the SD card by URL.

Tip

Large, image-heavy EPUBs (10 MB+) can be slow to convert and use a lot of memory. When downloading such a book from BookFusion you'll get a size warning first. For faster covers/thumbnails, pre-optimize EPUBs with a converter such as [epub-to-xtc-converter](#).

6. Browsing Your Library

Browse Files

A file/folder browser over the SD card.

- **Navigate: Left/Up** and **Right/Down** move the cursor; long-press to jump a full page.
- **Open: Confirm** opens a folder or reads a book.
- **Delete:** hold and release **Confirm** to delete the selected file (with a confirm/cancel prompt). Folder deletion is not supported.
- **Progress column:** each row shows a right-aligned marker — X (finished, ≥90%), a percentage like 21% (in progress), or blank (unopened / directory).
- A & prefix marks books linked to your BookFusion account.

- Down

Folder views

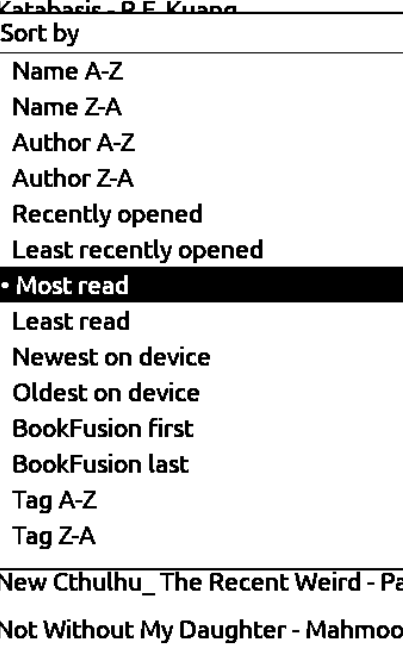

Settings → **Display** → **Folder View** changes how Browse Files is organised:

View	Behaviour
Folders (default)	Real SD-card directory structure.
Tags	Groups books by tag (from BookFusion / metadata).
Authors	Groups books by author.
Series	Groups books by series.

Tags / Authors / Series present a list of groups; open a group to see its books.

Sorting

Lists (Library, Recent Books, File Browser) are sortable. **Short-press Power** opens the **Sort Menu**; the chosen mode persists across reboots. Modes include: Name A–Z / Z–A, Author A–Z / Z–A, Recently / Least-recently opened, Most / Least read, Newest / Oldest on device, Date added, **BookFusion first / last**, and **Tag A–Z / Z–A**.

The screenshot shows a digital bookshelf with a list of books. A context menu is open over the list, showing sorting options. The books listed are:

- Farseer Trilogy Omnibus - Robin ... 40%
- Katabasis - P.F. Kuang 21%
- New Cthulhu_ The Recent Weird - Pau...
- Not Without My Daughter - Mahmood...

The sort menu options are:

- Sort by
- Name A-Z
- Name Z-A
- Author A-Z
- Author Z-A
- Recently opened
- Least recently opened
- Most read**
- Least read
- Newest on device
- Oldest on device
- BookFusion first
- BookFusion last
- Tag A-Z
- Tag Z-A

At the bottom of the screen, there are four buttons: Home, Open, Up, and Down.

7. The Reader Menu

Press **Confirm** while reading to open the reader menu.

Add Bookmark	Bookmark the current page.

Action	What it does
Save Clipping	Save a text clipping/highlight from the current page.
View Clippings	Browse saved clippings for this book.
Take Screenshot	Save the current screen to screenshots/ .
Display QR	Show a QR code (e.g. to open a link).
Book Info	Full metadata panel (see below).
Mark as Completed	Sets progress to 100%, counts the book as finished, returns Home.
Go Home	Close the book and return to the Home screen.
Sync: Push / Pull	Upload or apply reading progress with your sync server.
Delete Cache	Clear this book's cached layout (forces a re-parse).

Book Info panel

Book Info shows the open book's full metadata: series & number, bookshelf, categories, lists, publisher, published date, tags, rating, language, and the full description (or "No description available"). Series/shelf/tags/rating/description are populated for books synced from BookFusion.

Book Info

Farseer Trilogy Omnibus

Author: Robin Hobb

Lists: currently_reading

Published: 2013-06-26

Publisher: HarperCollins Pu...

Language: en

Progress: 40%

Description

and lonely. Only his magical link with animals—the old art known as the Wit gives him solace and companionship. But the Wit, if used too often, is a perilous magic, and one abhorred by the nobility. So when Fitz is finally adopted into the royal household, he must give up his old ways and embrace a new life of weaponry, scribing, courtly manners; and how to kill a man secretly, as he trains to become a royal assassin! Enter the extraordinary world of Robin Hobb's magnificent Farseer Trilogy. This bundle includes Assassin's Apprentice (book one), Royal Assassin (book two) and Assassin's Quest (book three).

[Back](#)[Open](#)[Prev Book](#)[Next Book](#)

Footnotes

Settings → **Reader** → **Footnotes** chooses how footnotes appear:

- **On page** — footnote text is rendered at the bottom of the referencing page, beneath a horizontal rule. Layout reserves space so it never overlaps the body text.
- **In menu** — footnotes are collected into the reader menu instead.

8. Bookmarks & Clippings

- **Bookmarks** mark a page so you can jump back to it. Add one with the reader menu's **Add Bookmark** (or bind **Bookmark** to a button / long-press / short-Power). View and jump via **Bookmarks**.
- **Clippings** save passages of text from a book. Use **Save Clipping** while reading, then **View Clippings** to review them. Clippings are text-only.

When saving a clipping you pick the start and end lines directly on the page — the selected passage is shown highlighted:

ready to rescue me in the event of an emergency.

NASA had sunk a metal lab table into the pool for me. The biggest problem wasn't making equipment that worked in vacuum—though they did have to completely redesign pipettes because there's no suction force in space. The problem was the ham-fisted EVA gloves the user had to wear. Astrophage may like vacuum, but human bodies certainly don't.

But hey, at least I was learning a lot about how Russian EVA suits worked.

Yes, Russian. Not American. Stratt listened to several experts and they all agreed the Russian Orlan EVA suit was the safest and most reliable. So that's what the mission would use.

"Okay, I see what happened," said Forrester through the headset. "You told the clamp to tilt yaw, but it released instead. The internal microcable wires must be tangled up. I'll be right there. Can you surface and bring the clamp with you?"

"Sure thing." I waved to the two divers and pointed upward. They nodded and helped me to the surface.

I got hoisted out of the pool by a crane assembly and placed on the deck nearby. Several techs came forward and helped me out of the suit. Though it was pretty easy—I just stepped out the back panel. Got to love chrysalis suits.

Forrester came from the control room next door and collected the tool. "I'll make some changes and we can try again in a couple of hours. I got a call while you were in the pool; you're needed in Building 30. Shapiro and DuBois have a couple-hour break while they reset the flight-control simulators. No rest for the wick

9. Reading Stats

Open from **Home** → **Reading Stats**. Tracks sessions across .epub , .txt , and .xtc . Metrics include **Reading Time**, **Pages Read**, **Books Finished**, **Sessions**, **Average Session**, **Reading Speed**, and **In Progress**. Books at $\geq 90\%$ count as finished.

Stats are organised into tabs — **Overview** (streaks, daily goal, totals, and a reading profile), **Books**, **Week**, **Month** (a calendar heat-map of reading time per day), and **Sessions**:

Reading Stats

BookFusion also pulls rich metadata (series, bookshelf, tags, rating, lists, description) into the [Book Info](#) panel, adds **BookFusion first/last** and **Tag A-Z/Z-A** sort modes, and marks synced books with a **&** prefix in all list views. Book covers for BookFusion books always come from the API image (not the EPUB).

KOReader Sync Quick Setup

KatiePoint syncs reading position with KOReader-compatible sync servers, and interoperates with KOReader apps/devices using the same server and credentials.

Option A: Free Public Server (`sync.koreader.rocks`)

1. Register a user once (only if you don't already have KOReader Sync credentials):

```

USERNAME="user"
PASSWORD="pass"
PASSWORD_MD5="$(printf '%s' "$PASSWORD" | openssl md5 | awk '{print $2}')"

curl -i "https://sync.koreader.rocks/users/create" \
  -H "Accept: application/vnd.koreader.v1+json" \
  -H "Content-Type: application/json" \
  --data "{\"username\":\"$USERNAME\",\"password\":\"$PASSWORD_MD5\"}"

```

An HTTP 402 with `{"code":2002,"message":"Username is already registered."}` means the name is taken — pick another or use that account.

2. On each KatiePoint device: **Settings** → **System** → **KOReader Sync**.

- Set **Username** and **Password** (enter the *plain* password; KatiePoint computes MD5 internally). Use the same values on every device.
- Set **Sync Server URL** to `https://sync.koreader.rocks`, or leave it empty (same default).
- Run **Authenticate**.

3. While reading, open the reader menu → **Sync**. Choose **Apply Remote** to jump to the remote position, or **Upload Local** to push your current progress.

Option B: Self-Hosted Server (Docker Compose)

1. Start a sync server:

```
mkdir -p kosync-quickstart && cd kosync-quickstart
```

```

cat > compose.yaml <<'YAML'
services:
  kosync:
    image: koreader/kosync:latest
    ports:
      - "7200:7200"
      - "17200:17200"
    volumes:
      - ./data/redis:/var/lib/redis
    environment:
      - ENABLE_USER_REGISTRATION=true
    restart: unless-stopped
YAML

```

```
docker compose up -d # or: podman compose up -d
```

Note

`ENABLE_USER_REGISTRATION=true` is convenient for first setup. Set it to `false` afterwards to avoid unexpected registrations.

2. Verify:

```
curl -H "Accept: application/vnd.koreader.v1+json" "http://<server-ip>:17200/healthcheck"
→ {"state":"OK"} .
```

3. Register a user (KatiePoint authenticates with the MD5 of the password):

Warning

Sending a reusable MD5-derived password over plain HTTP is insecure. Create unique sync-only credentials — don't reuse your main password. Prefer the HTTPS listener (`https://<server-ip>:7200`) on untrusted networks; use `curl -k` only for self-signed-cert testing.

```
USERNAME="user"
PASSWORD="pass"
PASSWORD_MD5="$(printf '%s' "$PASSWORD" | openssl md5 | awk '{print $2}')
```

```
curl -i "http://<server-ip>:17200/users/create" \
-H "Accept: application/vnd.koreader.v1+json" \
-H "Content-Type: application/json" \
--data "{\"username\":\"$USERNAME\",\"password\":\"$PASSWORD_MD5\"}"
```

4. On each device: **Settings** → **System** → **KOReader Sync** → set Username/Password (plain password), **Sync Server URL** = `http://<server-ip>:17200` (or `https://<server-ip>:7200`), then **Authenticate**.

5. Sync from the reader menu as in Option A.

Document Matching (KOReader Sync settings) chooses how books are matched across devices: **Filename** or **Binary** (content hash).

11. Settings Reference

Settings are organised into tabs, selected via the top ribbon: **Display**, **Reader**, **Stats**, **System**, and **Developer** (only when Developer Mode is on). Most of these are also editable from the web settings page

(File Transfer → Join Network).

Display tab

- **Sleep Screen** — Dark / Light / Custom / Cover / None / Cover + Custom (see [Sleep Screen](#)).
- **Sleep Cover Mode** — Fit / Crop (when using a cover sleep screen).
- **Sleep Cover Filter** — None (grayscale) / Contrast / Inverted.
- **Seamless Sleep Screen** — Never / After Timeout / Always.
- **Hide Battery %** — Never / In Reader / Always (icon still shown).
- **Refresh Frequency** — full-refresh every 1 / 5 / 10 / 15 / 30 pages (reduces ghosting).
- **UI Theme** — Classic / Lyra / Lyra Extended / Lyra Library (see [Home Screen](#)).
- **Sunlight Fading Fix** — software fix for white X4 units fading in direct sunlight.
- **Reader Dark Mode** — invert reading to light-on-dark.
- **Folder View** — Folders / Tags / Authors / Series (see [Folder views](#)).

Reader tab

- **Font Family** — Bookerly / Inter / Open Dyslexic / Monospace. SD-card fonts can also be loaded (see [sd-card-fonts](#)).
- **Font Size** — Small / Medium / Large / X-Large (plus an X-Small size).
- **Line Spacing** — Tight / Normal / Wide.
- **Screen Margin** — 5–40 px in 5-px steps.
- **Paragraph Alignment** — Justify / Left / Center / Right / Book's Style.
- **Embedded Style** — use the EPUB's own HTML/CSS formatting.
- **Orientation** — Portrait / Landscape CW / Inverted / Landscape CCW.
- **Extra Paragraph Spacing** — space between paragraphs vs. first-line indent.
- **Text Anti-Aliasing** — smooth grey edges on text (slightly slower page turns).
- **Images** — Display / Placeholder / Suppress.
- **Footnotes** — On page / In menu.
- **Bionic Reading** — bold word-starts (see [Bionic Reading](#)).
- **Show Button Hints** — None / Short Press / Long Press / Front Only Short / Front Only Long.
- **Font & Layout Preview** (*action*) — live split-screen font/layout editor: the sample page at the top re-renders as you change each option below.

Font & Layout

The five boxing wizards jump quickly. Good typography should feel effortless, with balanced margins and comfortable spacing between the lines so your eyes glide from word to word without any strain.

Adjust the font, size, and layout until the page looks just right. The preview above updates instantly as you change each option, so you can compare choices side by side before you settle on a favourite.

A longer passage helps at smaller sizes: quirky jackdaws and vexing zephyrs, bright mornings, quiet evenings, and the steady rhythm of a good book carrying you along, one page after another.

Reader Font Family	Bookerly
Reader Font Size	Medium
Reader Line Spacing	Tight
Reader Paragraph Alignment	Justify
Reader Screen Margin	15
Extra Paragraph Spacing	ON
Bionic Reading	OFF
Text Anti-Aliasing	ON
Reading Orientation	Portrait

Back

Change

Up

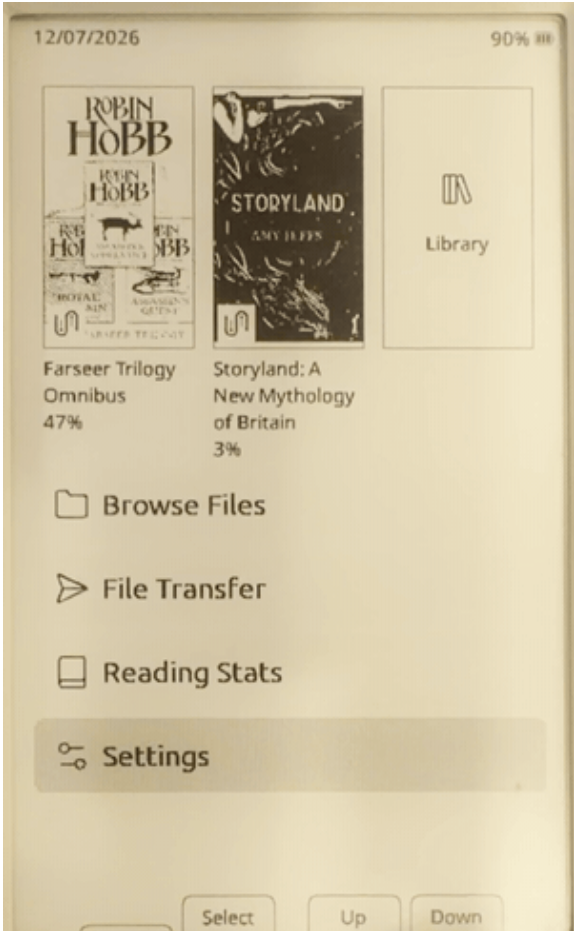

Down

- **Customise Status Bar** (*action*) — see below.
- **Reader Controls** (*action*) — bind a **short-press** and **long-press** action to each reader button. Choose from Chapter Forward/Back, Menu, Files, Sync, Bookmark, Screenshot, Mark Finished, Auto Turn, Bionic, Button Hints, Rotate, and more. Bindings attach to *logical* button roles, so they survive front-button remaps. There's a live preview; **Confirm** cycles, **Back** saves.

Reader Controls

Back Short press	Menu
Back Long press	Home
Confirm Short press	Bookmark
Confirm Long press	Sync
Left Short press	Prv Pg
Left Long press	None
Right Short press	Nxt pg
Right Long press	None
Up Short press	Prv Pg
Up Long press	Chapt Back
Down Short press	Nxt pg
Down Long press	Chapt Fwd
Power Short press	Nxt pg
Power Long press	Sleep

SaveChangeUpDown

Customise Status Bar

Configure what the reading status bar shows: **Chapter Page Count**, **Book Progress %**, **Progress Bar** (Book / Chapter / Hide) and its **thickness** (Thin / Medium / Thick), **Title** (Book / Chapter / Hide), **Battery**, **Time Left** (Hide / Chapter / Book), and a **Clock** (with UTC offset and 12h/24h format). These are also editable from the web settings page.

Stats tab

See [Reading Stats](#) — Daily Reading Goal, Minimum Session Length, Sleep Stat slots 1–3, "If Found" contact, Set Date, Time Zone, and Export/Import (incl. StoryGraph).

System tab

- **Front Button Follows Orientation** — front-button roles rotate with the screen.
- **Remap Front Buttons** (*action*) — reassign the four front buttons to different physical positions.
- **Short Power Button** — what a short Power press does: Sync / Page Turn / Force Refresh / Sleep / Create Bookmark.
- **Long-press Action** — the reader long-press action (Sync / Page Turn / Force Refresh / Sleep / Create Bookmark).
- **Tilt Page Turn** (*X3 only, when the IMU is present*) — Off / Normal / Inverted.
- **WiFi Networks** (*action*) — manage saved networks.
- **KOReader Sync** (*action*) — see [KOReader Sync](#).
- **BookFusion Sync** (*action*) — link/manage your BookFusion account.
- **OPDS Browser** (*action*) — server URL, username, password.
- **Check for Updates** (*action*) — OTA firmware update over WiFi.
- **SD Firmware Update** (*action*) — flash a `firmware.bin` from the SD card.
- **Language** (*action*) — set the UI language.
- **Time to Sleep** — auto-sleep after 1 / 5 / 10 / 15 / 30 min of inactivity.
- **Show Hidden Files** — show dotfiles in the browser.
- **Developer Mode** — reveals the Developer tab.

Display

Up

Down

- **Clear Reading Cache** — wipe the `.crosspoint/` cache (forces re-parse of all books).
- **Recache Library** — rebuild the Library cover-grid index.
- **Recache Metadata** — rebuild book metadata.
- **Refresh BookFusion Metadata** — re-pull metadata for linked books.
- **Download from URL** — fetch a file to the SD card by URL.
- **Reset Reading Stats** — clear all statistics.

12. Sleep Screen

The **Sleep Screen** setting controls what shows when the device sleeps:

Mode	Behaviour
Dark (default)	KatiePoint logo on a dark background.
Light	Logo on a white background.
Custom	A custom image from the SD card (see below); falls back to Dark.

Mode	Behaviour
Cover	Cover of the currently open book; falls back to Dark if no book is open.
Cover + Custom	Book cover, falling back to Custom behaviour.
None	Blank screen.

Cover settings (for Cover / Cover + Custom): **Cover Mode** — Fit (scale to fit, white borders) or Crop (scale & fill); **Cover Filter** — None (grayscale), Contrast (B&W), or Inverted.

Custom images:

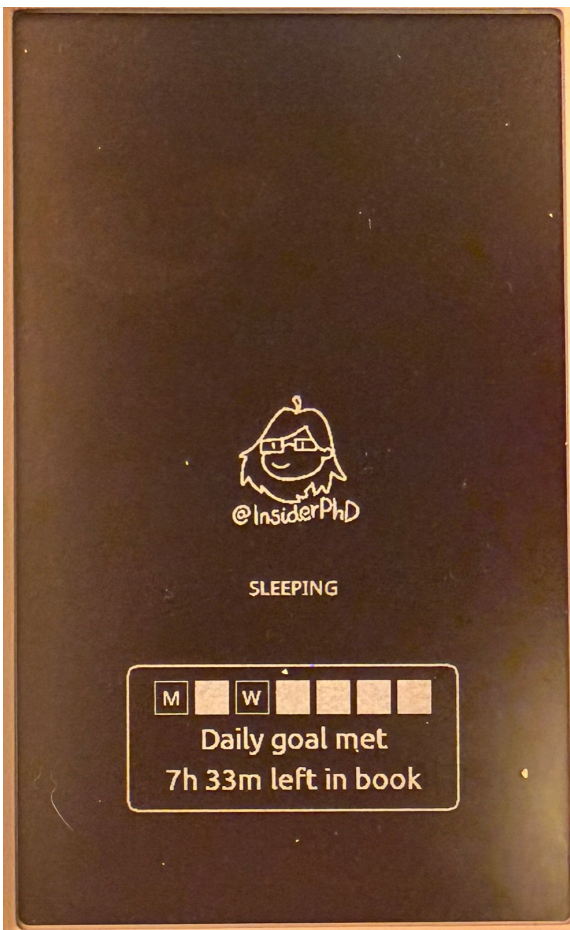

- **Multiple (recommended):** create a `.sleep` directory at the SD-card root and drop in any number of `.bmp` files — one is chosen at random each sleep. (A `.sleep` directory is also accepted.)
- **Single:** place `sleep.bmp` at the SD-card root as a fallback.

Tip

Use uncompressed 24-bit BMPs. Match your screen: **X4 = 480×800**, **X3 = 528×792**.

You can also overlay up to three reading stats on the sleep screen — see [Sleep-screen stats](#). Here's a Custom (dark) sleep screen with the weekly streak, daily goal, and book-time-left stats shown at the bottom:

13. Firmware Updates

- **Over the air:** **Settings** → **System** → **Check for Updates** pulls the latest release. An SD card must be inserted while it stages the image.
- **From SD card:** put a release `firmware.bin` on the card and use **Settings** → **System** → **SD Firmware Update**.
- **From URL:** **Settings** → **Developer** → **Download from URL**.

Prebuilt firmware is on the [Releases page](#).

Supported Languages

KatiePoint renders text using these Unicode blocks:

- **Latin (Basic, Supplement, Extended-A):** English, German, French, Spanish, Portuguese, Italian, Dutch, Swedish, Norwegian, Danish, Finnish, Polish, Czech, Hungarian, Romanian, Slovak, Slovenian, Turkish, and others.

- **Cyrillic (Standard and Extended):** Russian, Ukrainian, Belarusian, Bulgarian, Serbian, Macedonian, Kazakh, Kyrgyz, Mongolian, and others.

Not supported: Chinese, Japanese, Korean, Vietnamese, Hebrew, Arabic, Greek, Farsi.

The **UI language** (menus and messages) is set in **Settings** → **System** → **Language**. Available UI languages include English, Spanish, French, German, Italian, Portuguese, Russian, Ukrainian, Polish, Swedish, and Norwegian.

15. Troubleshooting & Escaping Bootloop

If you hit a crash, please open an issue and attach serial-monitor logs. Connect the device by USB and run:

```
pio device monitor
```

(or use a browser tool like [Serial Monitor](#)).

Stuck in a bootloop? Press and release **Reset**, then hold **Back + Power** to boot to the Home screen (skipping auto-reopen of the last book).

Corrupt cache or config? Delete the `.crosspoint` directory on the SD card — or, more surgically, just `settings.bin`, `state.bin`, or an `epub_*` cache folder inside `.crosspoint/`. See also [docs/troubleshooting.md](#).
